Abstract: Annotated List of the species of Lepidoptera recorded in Southernmost Provinces of Thailand *Priamus* 12 (3): 63-93, 1 map, 3 Plates (22 figures).

This paper deals with the Lepidoptera species hitherto recorded in the Southernmost Provinces of Thailand. Totally 1146 species are listed alphabetically under the relevant families. For each species, the scientific name, author, date of publication, synonyms, and if available, larval foodplants are mentioned.

Key Words: *Lepidoptera*, fauna, checklist, Thailand.

Introduction

The aim of this publication is to determine the list of the Lepidoptera recorded in the southernmost Provinces of Thailand so far. For this purpose, southern territories of the Ranong-Chumphon line in the Peninsula are evaluated (map). The Lepidoptera species, 1146, recorded in the most prominent collecting localities within the provinces (or districts), found in the Databank program of the Cesa are listed in this publication. In the following 14 provinces, the number of the recorded Lepidoptera species are mentioned in paranthesis: Chumphon (50), Ranong (406), Suratthani (75), Phangnga (42), Krabi (38), Phuket (81), Trang (354), Nakhon Sri Thammarat (458), Songkla (220), Pattani (26), Yala (283), Satun (43), Phatthalung (0), and Narathiwat (281) (map).

The Lepidoptera of Thailand, unfortunately, has not been studied properly so far. The number of the taxonomical and faunistical publications are extremely low.³ Therefore, total number of the Lepidopteran species is also low for a large tropical country, i.e., 4337⁴. Although the Peninsula of the Southern Thailand is extremely important from the zoogeographical standpoint, up to the present time, these territories have been omitted by the native and foreign researchers very much, in determining their Lepidoptera fauna. Therefore, the recorded number of the species (1146) are remarkably low.

³ According to the Databank of the Cesa current number of these publications is 529. For a comparison, number of the taxonomical and faunistical publications on the Lepidoptera of Turkey is 1910.

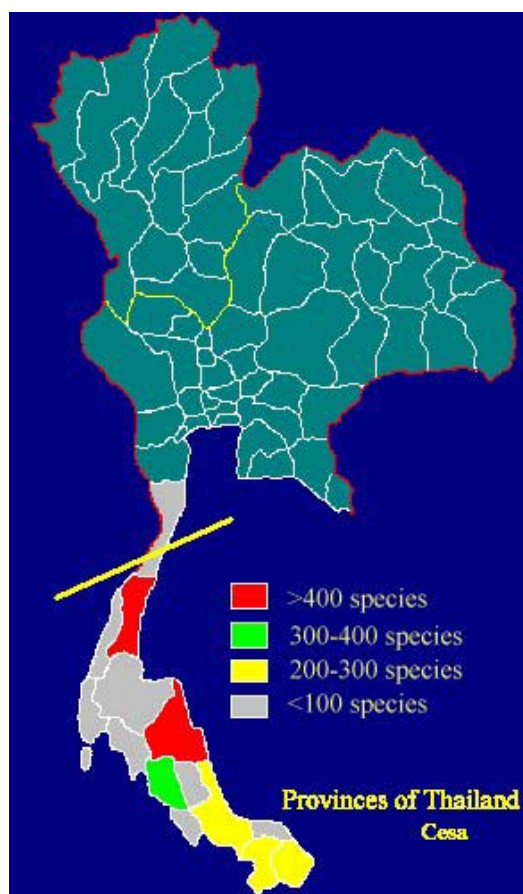

⁴ According to the Databank of the Cesa current number of the Lepidoptera of Turkey is 5082. Turkey is located in a temperate belt of the northern hemisphere.

In the last decades, lepidopterologically, Chiang Mai Province in the north Thailand has been studied better than the others in Thailand. According to the Databank of the Cesa, the present number of the Lepidopteran species in Chiang Mai Province only, is 2021⁵. After comparing with this number, the Peninsula should have much more than 3000 lepidopteran species, provided that planned and extensive works in the remote areas, collaborative studies in the laboratories and museums should be carried out for a reasonable period.

In the following list, 1146 lepidopteran species are listed alphabetically under the relevant families. For each species, the scientific name combination, author, date of publication, synonyms, and if available, larval food-plants are mentioned.

A c k n o w l e d g e m e n t: Authors would like to express their sincere thanks to Assoc. Prof. Dr. Chutamas Satasook (Dean of Faculty of Science), and Assoc. Prof. Dr. Nongporn Towatana (Associate Dean for International and Public Relations), Prince of Songkla University, Hatyai, Thailand for their kind invitation and permission for studying the Lepidoptera preserved in the Natural History Museum of the University, as well as organisation of the excursion to the Tone Nga Chang NP. We thank also to Assoc. Prof. Dr. Paitoon Leksawasdi, Department of Biology, Chiang Mai University for his kind support and encouragement to our researches in Thailand.

Priamus⁶**ISSN 1015-8243**

Priamus is the first international serial publication of the Centre for Entomological Studies Ankara, and appears in volumes at irregular intervals. Each volume is composed of four or six parts.

The serial serves as a refereed publication outlet and accepts original manuscripts of the researchers of the Cesa. Articles accepted deal with the Insect taxonomy, nomenclature, morphology, bibliography, check-list, fauna, biodiversity, distribution, biogeography, ecology, insect-plant interactions, bionomy, and behaviour. The Cesa is a non-profit organization, no royalties will be paid to the authors of contributions. Papers accepted become the copyright of the journal. The publication languages are Turkish, English, German, Uighur language, and Chinese.
